

1. Who were the first three authors to identify TOI-6324 b?

- Rena A. Lee
- Fei Dai
- Andrew W. Howard

2. How many systems rely on position data (RA, Dec) from sources other than the TICv8 (TESS Input Catalog)?

- 264

3. Explore one of these position reference papers. What was the purpose of their survey?

The Kilodegree Extremely Little Telescope (KELT) survey, carried out with two robotic telescopes, aims to detect transiting exoplanets around bright stars with apparent magnitudes of $V < 11$. The research paper investigates the discovery of KELT-1b, a highly inflated, 27 Jupiter-mass exoplanet with a short orbital period, through photometric, spectroscopic, and radial velocity observations to refine its physical and orbital characteristics.
